

Preparing for Exam #1

Exam #1 will cover all the material up to this point. This includes all the introductory material as well as descriptive statistics, probability, probability distributions, expected value, normal distribution, sampling distribution of the sample mean. You should be able to do problems by hand and with your calculator, and you should be comfortable with MS Excel.

Make use of the reviews available on the Handouts page of the course website. Practice with as many problems as you can find.

This exam will be in multiple-choice format, and you will also be required to **SHOW YOUR WORK**. Don't let sloppiness cost you a good grade on this exam.

Bring **CALCULATORS** and #2 pencils. You will be provided with the formulas-and-tables packet and scrap paper.
